

First HSDR Summer School and 7th International Meeting on Healthcare Systems Design Research (HSDR7)

24th-28th of June 2023.

KTH Flemingsberg, Stockholm, Sweden

First HSDR Summer School

The First Health Systems Design Summer School (HSDSS) was a one-week summer school where young researchers from all over the world came together to work on interdisciplinary projects around health systems design. The primary focus of the summer school was to connect participants from different research disciplines to peers with a shared interest in health systems while working on novel research projects. Participants were free to ideate research projects, whose preliminary results were presented at the end of the workshop.

7th International Meeting on Healthcare Systems Design Research (HSDR7)

The final two days of the summer school were partially co-located with the 7th International Workshop on Health Systems Design Research (HSDR7). This workshop brought together the special interest group, comprising leading researchers working on various aspects of systems design and engineering, from modelling, engagement, logistics, informatics to participatory methods. The students in the summer school had a unique opportunity to interact with, learn from and present to this group.
